

# **A quick 3 step guide to measuring your overdoor heating project**

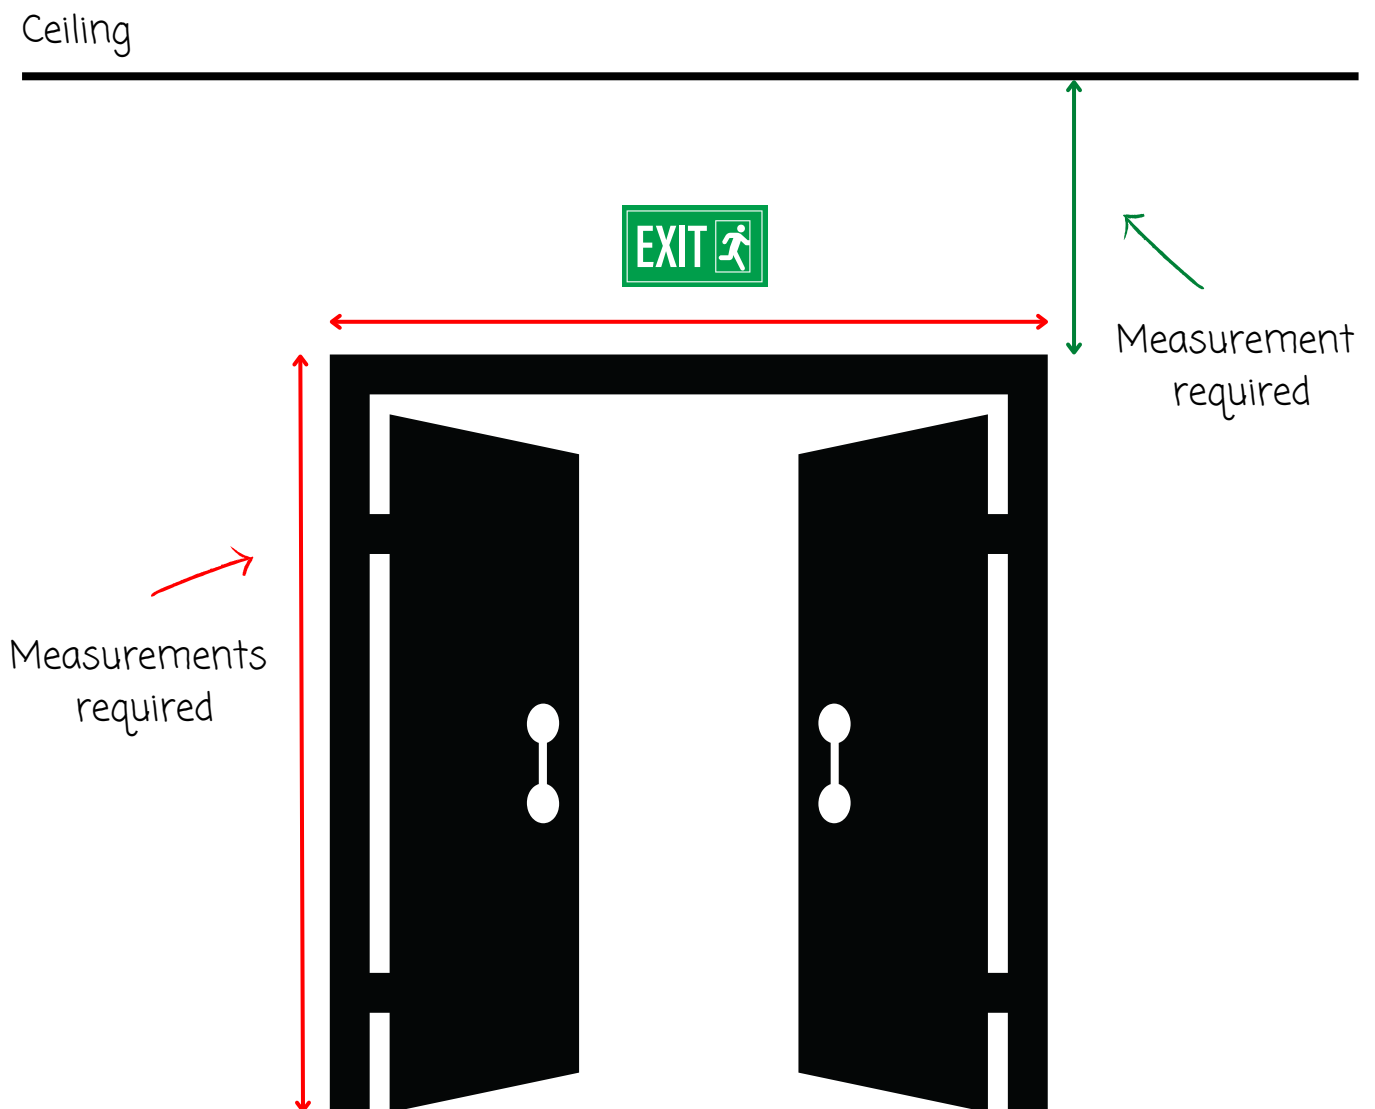

Measure, record, submit.

Please follow this quick guide and send us your remeasurements so we can accurately quote you an overdoor heating solution .

# STEP 1

## Measuring your doorway

To accurately quote you an overdoor heating solution, all we require is the dimensions of your door (red lines) and the distance between the ceiling/bulkhead to the top of your door (green line).

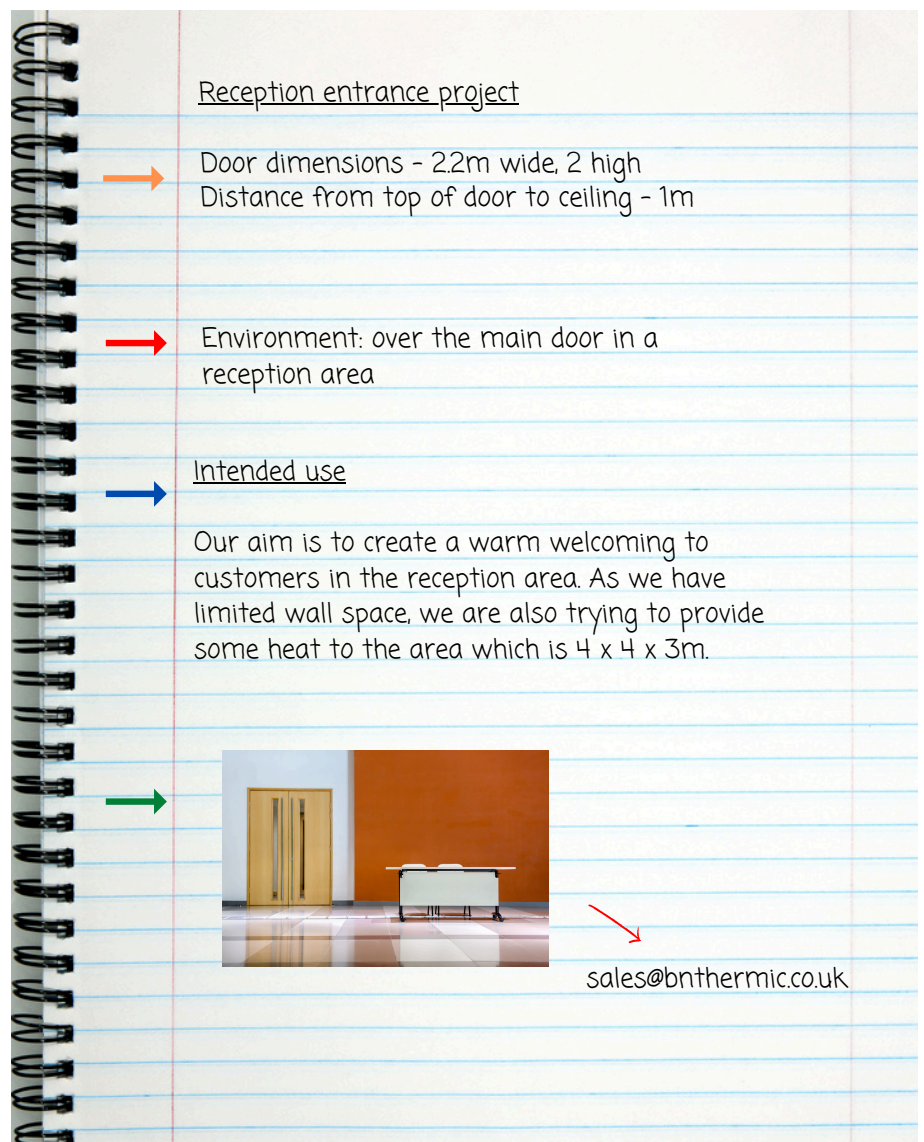

# STEP 2

## Recording your measurements

To submit your data, please follow the below. Also, any information on the environment and intended use of your over door heater is very useful.

Here's an example of how we record the measurements of an overdoor heating project. We would recommend you follow this layout.

- Here we need the basic dimensions of your project as per step 1
- Here you add the type of environment the heater will be living in e.g. industrial, reception, retail etc
- An understanding of how you intend to use an over door heater is also very handy as it helps us to specify the right model and possibly some controls
- A photo of your door way is always handy and can be send to [sales@bnthermic.co.uk](mailto:sales@bnthermic.co.uk)

# STEP 3

## Submitting your measurements

Once you have measured your door way, it is now time to submit your measurements to us. Our design team will then suggest the right heater and email it over with a spec sheet.

How to contact us:

Email: [sales@bnthermic.co.uk](mailto:sales@bnthermic.co.uk) (*preferred method*)

Phone: 01293 547 361

WhatsApp: 07518 574 345
