

A quick 3 step guide to measuring a spot heating project

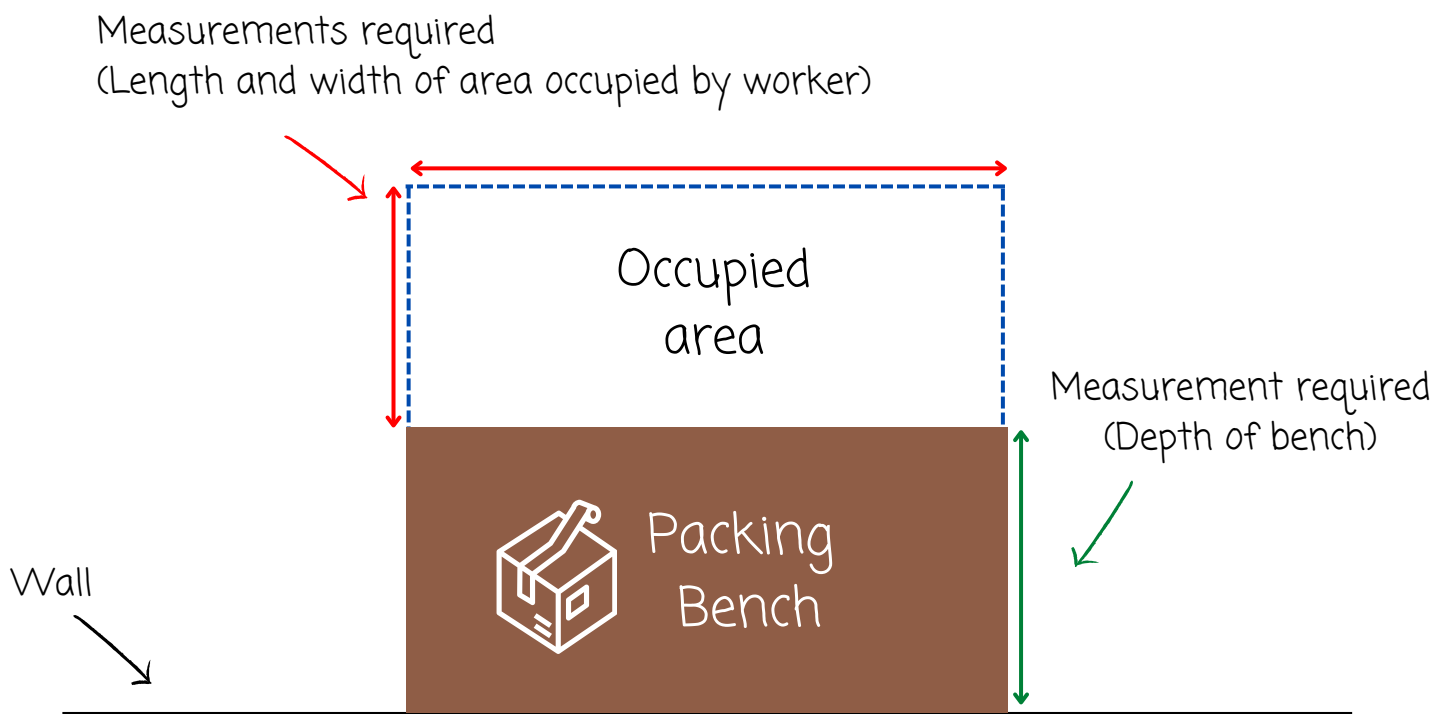

Measure, record, submit.

Please follow this quick guide and send us your remeasurements so we can accurately quote your spot heating project

STEP 1

Measuring the area you are looking to heat

This section focuses on spot heating a desk/packing area that is next to a wall. To quote an area like this, all we require is the dimensions of the area that is occupied by a person (red lines) and the depth of the bench/table (green line)

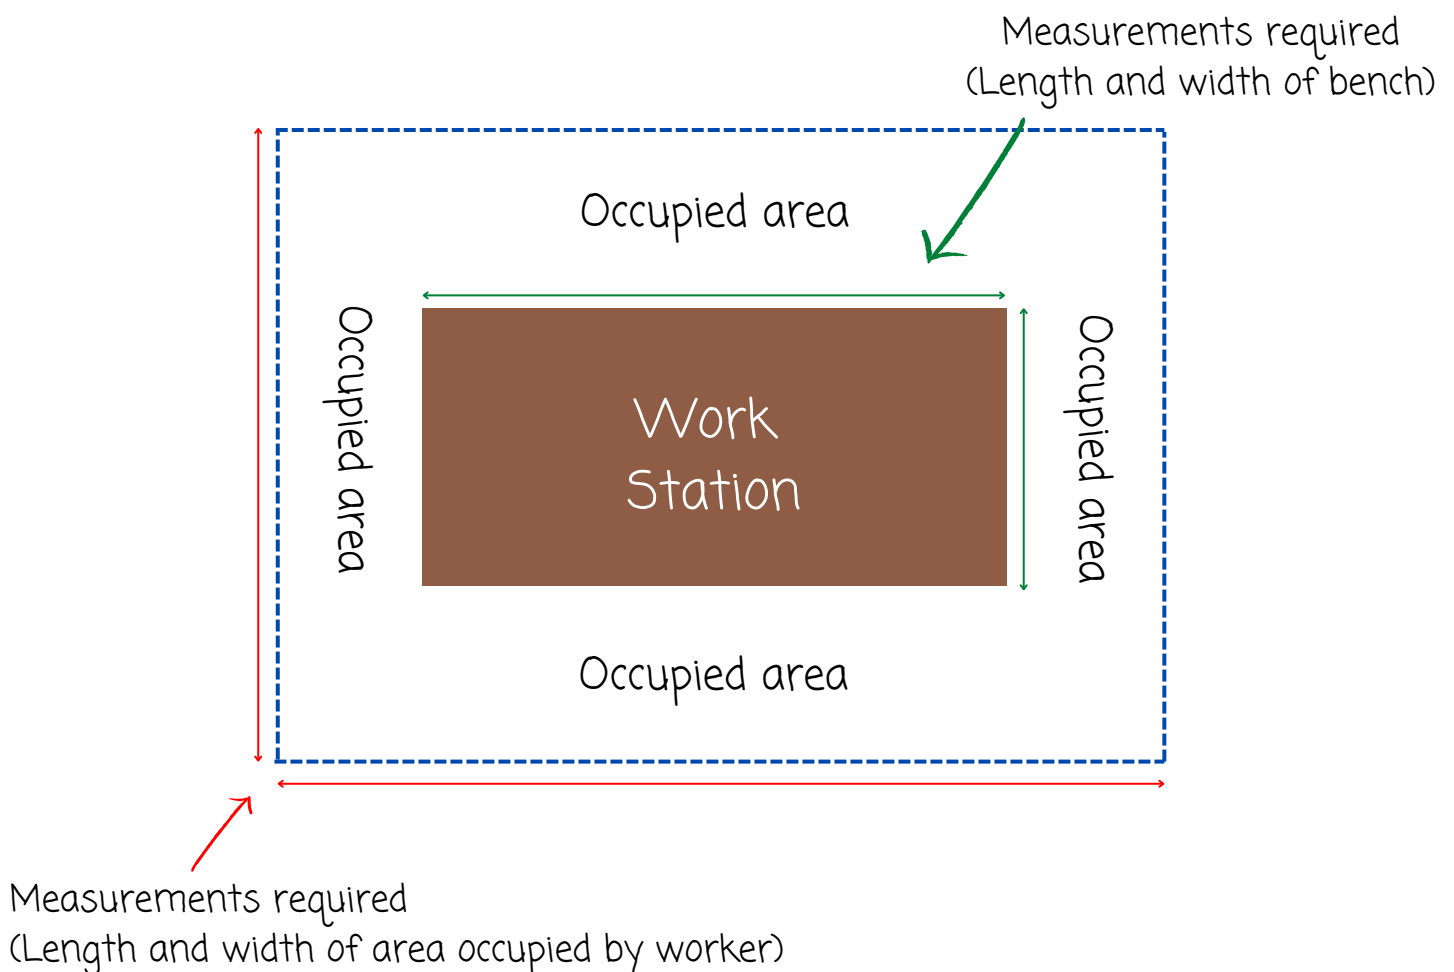

Rule of thumb, we usually calculate 'occupied areas' with a worker standing a meter away from the edge of the bench

STEP 1

Measuring the area you are looking to heat

This section focusses on heating a free standing work station which could be situated within a larger unheated area. Again we will need the dimensions of the occupied area (red lines) and the dimensions of the work station (green lines)

Rule of thumb, we usually calculate occupied areas with a worker standing a meter away from the edge of the bench

STEP 2

Recording your measurements

Once submitted, we'll will use your measurements to work out how many kW your project requires and which heaters are most suitable. It is vital the measurements are as accurate as possible.

Here's an examples of how we record the measurements of a spot eating project. We would recommend following this.

- This is the most simple way to record your measurements and gives us all the info we need
- An idea of any anomalies that might effect our specification is always very handy
- Sending a dimensioned sketch is again very handy for our design team
- Emailing an image of your work station allows us to get a much better understanding of your project

My Packing Station

Number of stations: 1
Dimension of table: 3 x 2m
Dimension of occupied area: 3 x 1m
Free standing or against wall: Bench against a wall
Mounting options: Wall mount - ceiling is 4m

→ Please note - there is a 4m roller shutter door a meter from the bench that's always open

→

STEP 3

Submitting your measurements

Once you have measured your area, it is now time to submit your measurements to us. Our design team will then put together a heating scheme and email you a detailed proposal.

How to contact us:

Email: sales@bnthermic.co.uk (*preferred method*)

Phone: 01293 547 361

WhatsApp: 07518 574 345
