

## CH CERAMIC HEATERS

### What is a Ceramic Heater?

A medium wave radiant heater that heats people directly with zero light output. Ideally suited for intermittently used applications where visible light output from a heater is not acceptable.

### Key Features

- Long life 'no glow' ceramic heat emitters
- Wall bracket with 'up and down' and 'side to side' angle adjustment
- Can be suspended (optional suspension kit available)
- 1m power lead (2-core and earth)

#### Energy Saving Tip

Control with a TS-8 run down timer to avoid heating an unoccupied area.
